

Cold Weather Package Option

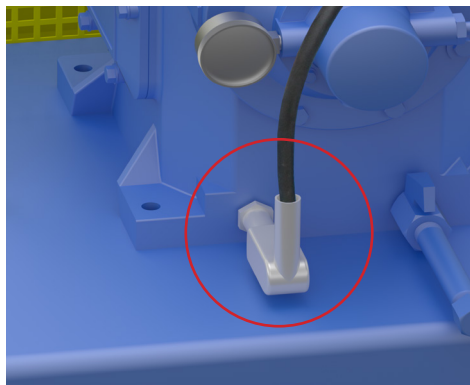

Description

This option includes an oil crankcase heater, control panel heater, and touch screen window cover that protects the unit against cold weather. This allows the unit to maintain oil viscosity, protects the LCD screen from the environment, protects integrity of electrical components, and extends ambient temperature range to -20°F (-29°C). The crankcase and enclosure heaters each include a thermostat to ensure that the heaters operate anytime conditions warrant. To ensure we are constantly improving, Hycomp reserves the right to make changes without prior notice

LCD Cover

Crankcase Heater

Panel Heater

Benefits

The cold weather package is ideal for installations that have the potential to see ambient temperatures less than 32°F. By extending the acceptable ambient temperature range to -20°F, the cold weather package ensures that the Hycomp booster remains ready for duty, even in the most severe conditions.

Installation

The cold weather package requires a 120VAC, 5A power supply.
